

Market Integrity

Our commitment

Barz is committed to fair, transparent, and verifiable prediction markets. Every market resolves from publicly available data. Every resolution is recorded on-chain with IPFS evidence. Anyone can verify any result independently.

Resolution standards

All markets on Barz resolve based on objective, publicly verifiable data sources. For daily music markets, the primary data source is Kworb (kworb.net), which tracks official Spotify chart positions and stream counts. Resolution evidence is stored permanently on IPFS, and the IPFS hash is recorded on-chain alongside the result.

Barz does not use subjective judgment to resolve markets. If the data says Artist A charted higher than Artist B, the market resolves accordingly — regardless of community sentiment or expectations.

Market voiding

In rare circumstances, a market may be voided. This can happen if the resolution data source becomes unavailable or unreliable, an error in market creation makes fair resolution impossible, or external events make the market question meaningless. When a market is voided, all participants are refunded at their cost basis. Fees on voided markets are not refunded.

Prohibited activity

The following activities violate Barz's integrity standards: wash trading (buying both sides of a market to inflate volume), coordinated manipulation (organized groups acting to artificially move prices), oracle manipulation (attempting to interfere with the data sources used for resolution), and exploiting smart contract vulnerabilities.

Barz monitors on-chain activity for suspicious patterns. Wallets identified as engaging in prohibited activity may be flagged publicly on the leaderboard or excluded from platform incentives.

Transparency

Barz is built on Solana. All smart contract code governing market creation, trading, resolution, and payouts is on-chain and verifiable. The program ID is

[Bjay4FXWnxa6xt2jkNn2foosjSgv2zdptm49e4CJXNuZ](#). Anyone can inspect the program's instructions and account state at any time.

Reporting

If you believe a market has been resolved incorrectly or you suspect manipulation, contact us at integrity@barzmarket.io with the market link and details of your concern.
